1 Toward a unified framework for version modeling in engineering databases ◼
Randy H. Katz
December 1990 **ACM Computing Surveys (CSUR)**, Volume 22 Issue 4

Full text available: 📄 pdf(3.14 MB)   Additional Information: full citation, abstract, references, citings, index terms, review

Support for unusual applications such as computer-aided design data has been of increasing interest to database system architects. In this survey, we concentrate on one aspect of such support, namely, version modeling. By this, we mean the concepts suitable for structuring a database of complex engineering artifacts that evolve across multiple representations and over time and the operations through which such artifact descriptions are created and modified. There have been ...

2 Step-by-step: a concept for describing co-operation within workflow management systems ◼
Katharina Just
April 1996 **ACM SIGOIS Bulletin**, Volume 17 Issue 1

Full text available: 📄 pdf(281.24 KB)   Additional Information: full citation, citings, index terms

3 Semantic Web Services: Simulation, verification and automated composition of web services ◼
Srini Narayanan, Sheila A. McIlraith
May 2002 **Proceedings of the eleventh international conference on World Wide Web**

Full text available: 📄 pdf(439.25 KB)   Additional Information: full citation, abstract, references, citings, index terms

Web services -- Web-accessible programs and devices - are a key application area for the Semantic Web. With the proliferation of Web services and the evolution towards the Semantic Web comes the opportunity to automate various Web services tasks. Our objective is to enable markup and automated reasoning technology to describe, simulate, compose, test, and verify compositions of Web services. We take as our starting point the DAML-S DAML+OIL ontology for describing the capabilities of Web service ...

Keywords: DAML, automated reasoning, distributed systems, ontologies, semantic web, web service composition, web services
